HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

ADAMS

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	526	Per Capita Personal Income (1979)	\$7,354
Population (1980)	68,292	% of Population Receiving Public Assistance (1981)	1.7
Population per Square Mile (1980)	130	% of Labor Force Unemployed-Annual Average (1981)	7.2
% Population Change 1970 to 1980	+20.1		

Population by Age and Sex (1980)

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

BEAVER

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Mulier, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

BLAIR

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

BUTLER

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CAMERON

1982**State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CHESTER

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CLINTON

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

CUMBERLAND

1982**State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

ELK

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

FAYETTE

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

FULTON

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	435	Per Capita Personal Income (1979)	\$5,907
Population (1980)	12,842	% of Population Receiving Public Assistance (1981)	4.5

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

INDIANA

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

**LACKAWANNA****1982****State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

LEBANON

1982**State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

LYCOMING

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

**MERCER****1982****State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

MONTGOMERY

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

NORTHUMBERLAND

1982**State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureau of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

Other Personnel Shortages in County: Psychiatrists

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

PIKE

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

SNYDER

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

**SULLIVAN****1982****State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

Total Land Area	478	Per Capita Personal Income (1979)	\$5,909
Population (1980)	6,349	% of Population Receiving Public Assistance (1981)	3.3

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

UNION

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

WASHINGTON

1982

State Health Data Center

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

 POPULATION CHARACTERISTICS

1. DEMOGRAPHIC DATA

HEALTH PROFILES FOR PENNSYLVANIA COUNTIES

**WYOMING****1982****State Health Data Center**

Dick Thornburgh, *Governor, Commonwealth of Pennsylvania*
H. Arnold Muller, M.D., *Secretary of Health*

The Pennsylvania Department of Health has a legislative mandate to "protect the health of the people of the Commonwealth and to determine the most efficient and practical means for the prevention and suppression of disease." In order to advance toward these goals, we need statistical information on the health status of the population, the health care delivery system, and demographic and population characteristics.

The first health profiles were published in 1977 to provide a compendium of health data. These profiles have been updated and revised biennially, starting in 1978, to better meet the needs of governmental leaders, health program specialists, state and local planners, and concerned citizens.

The Health Profiles for Pennsylvania Counties are a series of 68 individual profiles—one for each county and one for the Commonwealth. The most recent information available was used. The year which the data represents is included in the profiles following each data item. 1980 enumerated census figures are used throughout the profiles for the listed population as well as in the computation of all rates.

The major data source is the State Health Data Center, Pennsylvania Department of Health—specifically the vital records component of the Cooperative Health Statistics System, the Annual Hospital and Long Term Care Questionnaires, the Health Personnel Surveys, and the Uniform Data Collection System for Drug and Alcohol information. Additional sources include other units of the Department, (i.e. the Bureaus of Quality Assurance, Epidemiology and Disease Prevention, and Professional Health Services), U.S. Bureau of the Census, U.S. Department of Commerce, Pennsylvania Department of Public Welfare, and Pennsylvania Bureau of Employment Security.

The profiles will continue to be updated biennially, with the next edition available in 1984. Comments and suggestions for improvement are welcome. If there are any questions or if additional information is needed, please contact the State Health Data Center, Pennsylvania Department of Health, P.O. Box 90, Harrisburg, Pennsylvania 17108, telephone number (717) 783-2548.

5. MORBIDITY (1981)

Incidence of Notifiable Diseases

Chicken Pox	1,623	Hepatitis: Unspecified	210	Salmonellosis	2,037
Gonorrhea	27,285	Measles	762	Shigellosis	171
Hepatitis: Type A	782	Mumps	421	Syphilis	714
Hepatitis: Type B	944	Rubella	11	Tuberculosis	1,048

HEALTH SERVICES AND FACILITIES

1. HOSPITALS (1981)

Number of Hospitals by Type					
Total	General Acute Care	Psychiatric	Rehabilitation	Federal	Other
294	227	27	14	10	16

General Hospitals by Number of Beds Set Up & Staffed					
Total	1-99	100-199	200-299	300-399	400+
227	41	71	54	29	32

General Hospitals by Occupancy Rate					
Total	Less than 60%	60-69%	70-79%	80-89%	90%+
224*	22	32	68	83	19

General Hospitals			
Number of Beds Set Up & Staffed	53,029	Number per 1,000 Population	4.5
Number of Admissions	1,870,718**	Number per 1,000 Population	157.7

Specialty and Federal Hospitals			
Number of Beds Set Up & Staffed	18,920	Number per 1,000 Population	1.6
Number of Admissions	152,879***	Number per 1,000 Population	12.9

Average General Hospital Semi-Private Daily Room Rate \$153.24****

* Data not available for three hospitals.

** Data not available for two hospitals.

*** Data not available for one hospital.

****Six hospitals did not report room rate.

2. LONG TERM CARE FACILITIES (1981)

Licensed/Approved Facilities by Level of Care and Certification

Type of Facility	Total	Certified-Medicare	Certified-Medicaid
Skilled Nursing Facility (SNF)	421	243	355
Intermediate Care Facility (ICF)	41	2	35
SNF/ICF Combined Facility	161	106	155
Ctrs. for the Mentally Retarded (MR)	39	1	38
TOTAL	662	352	583

Number of Licensed/Approved Beds			
Skilled	57,544	Number per 1,000 Population Aged 65 and Over	37.6
Intermediate	14,389	Number per 1,000 Population Aged 65 and Over	9.4
Sub-Total (SNF + ICF)	71,933	Number per 1,000 Population Aged 65 and Over	47.0
MR Center	8,297		
TOTAL	80,230		

1980 Median Semi-Private Daily Room Rate (Excluding MR Centers)

Skilled	\$42.00
Intermediate	\$38.00

 HEALTH SERVICES AND FACILITIES (Continued)

4. OTHER HEALTH SERVICES

a. Drug and Alcohol Treatment (1981)

Utilization of State Supported Drug and Alcohol Treatment Facilities
